

## Clarkson's Quick Facts

### Company History

Founded in 1947, Clarkson started off as a Millwright Rigging Company specializing in the textile industry. Over the years Clarkson continued to branch out to other industries as well. It didn't take us long to realize that we could better serve all of our customers if we were to offer turnkey services as well as our exemplarity Millwright / Rigging skills. With the additions of an excellent mechanical division, a custom sheetmetal specialty fabrication shop and a top notch electrical division we were poised to provide our customers with the quality workmanship and value that they had come to expect from us. We continually strive to exceed our customers' expectations and help them to succeed.
